

AMOS.

Operating System

Datasheet

Date: 2024-02-07
Revision: 1

AMOS: OPERATING SYSTEM

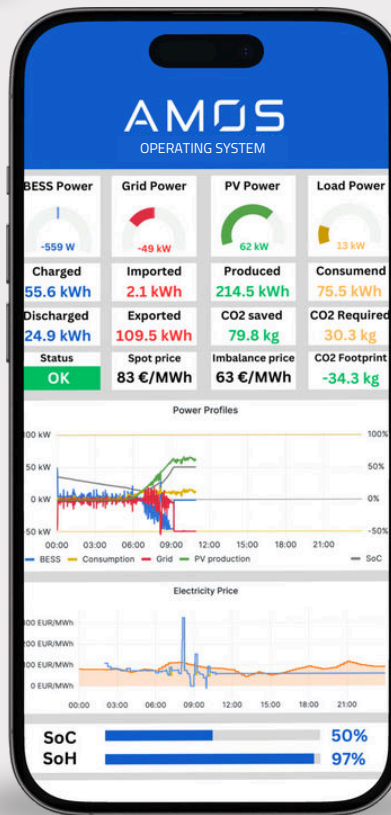

COMMANDER:
ALL-IN-ONE BESS
CONTROLLER

NAVIGATOR:
BESS ASSET MANAGER

GRIDGENIE:
COGNITIVE BUSINESS
INTELLIGENCE

STEADYGRID:
ANCILLARY SERVICES

COMPOSER:
VIRTUAL BATTERY
BLOCKS

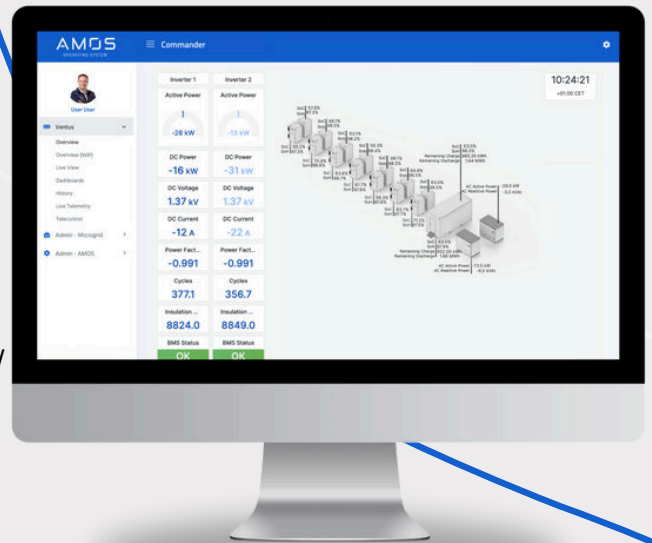

GUARDIAN:
REVOLUTIONARY BESS
OPTIMIZER

COMMANDER

All-in-one BESS controller

AMOS Commander is the ultimate solution for efficiently managing Battery Energy Storage Systems. With a comprehensive suite of features, it optimizes BESS performance, extends longevity, and seamlessly integrates with your power grid infrastructure.

PERFORMANCE SPECIFICATIONS:

BESS THERMAL MANAGEMENT

Optimizes the temperature of BESS components to enhance performance and prolong lifespan

REAL-TIME TELEMETRY

Continuously captures and transmits operational data in real-time via Modbus TCP

DIRECT POWER CONTROL

Allows to set desired power output from the BESS (active power, reactive power, power quality) via Modbus TCP

RAMP MANAGEMENT

Ensures that power changes adhere to prescribed ramp-up or ramp-down limits

CURRENT LIMITATION CONTROL

Prevents overloading and safeguards BESS integrity

POWER SYNCHRONIZATION CONTROL

Aligns BESS output power with the grid's frequency and phase

AUTOMATIC LOAD BALANCING

Intelligently allocates power to individual inverters to maximise efficiency and minimise thermal stress

POWER BACKUP

Grid forming, off-grid mode, black start

AUTOMATIC BESS CALIBRATION

Fine-tunes and adjusts operational parameters to ensure accurate and optimal performance

AUTOMATED TESTING

Automates Factory Acceptance Testing (FAT) and Site Acceptance Testing (SAT) procedures

APP HUB

Allows to install and run additional AMOS applications

AMOS

NAVIGATOR: BESS asset manager

AMOS Navigator revolutionizes Battery Energy Storage System management, offering a suite of features tailored to enhance efficiency and streamline operations. With AMOS Navigator, you can effortlessly oversee your assets, ensuring optimal performance and longevity.

PERFORMANCE SPECIFICATIONS:

COMPONENT INVENTORY MANAGEMENT

Records and visualizes product components in a comprehensive inventory list

ELECTRONIC SERVICE BOOK

Digital repository for service history, diagnostics, and all repairs performed on assets

MAINTENANCE CHECKLISTS

Provides editable checklists for commissioning, inspection, and repair procedures

PLANNED MAINTENANCE SCHEDULES

Establishes and manages scheduled maintenance activities to proactively address asset health

WORK ORDER MANAGEMENT

Tracks and monitors service and maintenance tasks and requests

OPTIMIZATION OF ASSET EXPANSION

Strategically plans and optimizes the expansion of assets for efficient scalability

FLEET MANAGEMENT

Manages and oversees the entire fleet of assets, ensuring coordinated and effective operation

USER MANAGEMENT

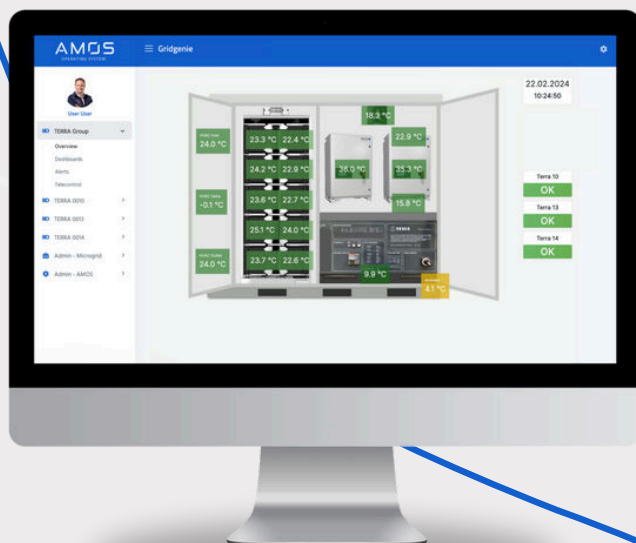

Administers user accounts and assigns roles to regulate access and permissions

AMOS

GRIDGENIE: Cognitive business intelligence

AMOS GridGenie redefines business intelligence for Battery Energy Storage Systems with its innovative features designed to provide actionable insights and enhance operational efficiency.

PERFORMANCE SPECIFICATIONS:

HEY AMOS

AI assistant that allows to interact with the system by asking questions in any language

LIVE TELEMETRY

Visualizes the current state of monitored BESS and all its components

THERMAL PROFILER

Employs advanced data processing techniques to visualize the distribution of heat within individual battery cells in a BESS

HEALTH MONITORING

Constantly assesses and reports the condition of assets to ensure optimal performance

EFFICIENCY MONITORING

Tracks and analyses the efficiency of BESS operations

REMOTE MONITORING AND CONTROL

Integrates the BESS into the customer's existing IT infrastructure via REST API, Websockets, and MQTT protocols

SMART ALERTS WITH NOTIFICATIONS

Issues automated alerts to promptly notify asset owners of critical events and conditions

TRENDS AND DASHBOARDS

Shows graphical representations of the time profiles of measured signals with complete signals' history

CUSTOM DASHBOARDS

Empowers customers to design and configure personalized dashboards according to their specific needs and preferences

DYNAMIC STATE LOG

Tracks the occurrence and duration of alerts and the operational state changes of system components

KPI's

Generates Key Performance Indicators to assess and measure the efficiency and performance of monitored assets

REPORTS

Generates concise and informative summary reports, providing a comprehensive overview

COMPLIANCE MONITORING

Constantly monitors compliance with regulatory requirements and industry standards

HISTORICAL DATA ANALYSIS

Analyzes historical performance data to identify trends, patterns, and opportunities

FULL TELEMETRY HISTORY WITH DATA EXPORT

Archives complete telemetry history and allows users to export data in common formats (Excel, CSV, JSON, ...)

API ACCESS

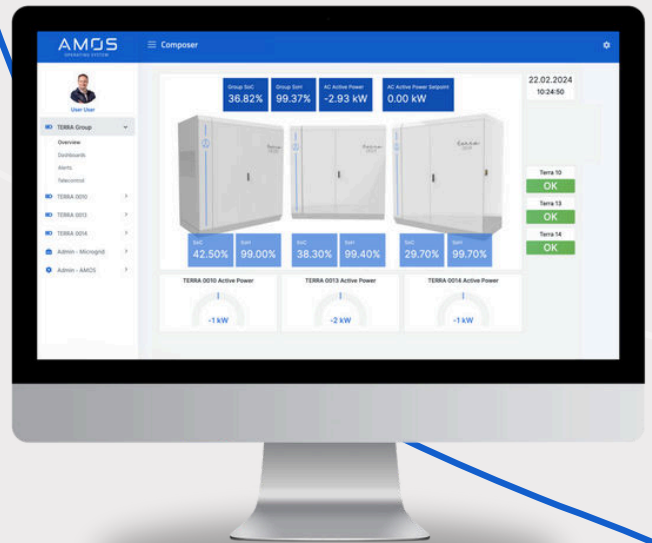

Provides programmatic access for integration with other applications or custom analysis

AMOS

COMPOSER: Virtual battery blocks

AMOS Supervisor introduces a groundbreaking concept with its Virtual Battery Blocks feature, providing unparalleled control and optimization capabilities for Battery Energy Storage Systems.

PERFORMANCE SPECIFICATIONS:

VIRTUAL BATTERY BLOCK CONTROLLER

Aggregates multiple physical BESS units into a single virtual battery block

VIRTUAL BATTERY BLOCK OPTIMIZER

Adjusts power setpoints for units in a virtual battery block to maximize performance and minimize degradation

DYNAMIC RECONFIGURATION

Allows to change the composition of a virtual battery block on-the-fly

AUTOMATIC SOC BALANCING

Autonomously balances State of Charge across all BESS units in a virtual battery block

THERMAL STRESS MINIMISATION

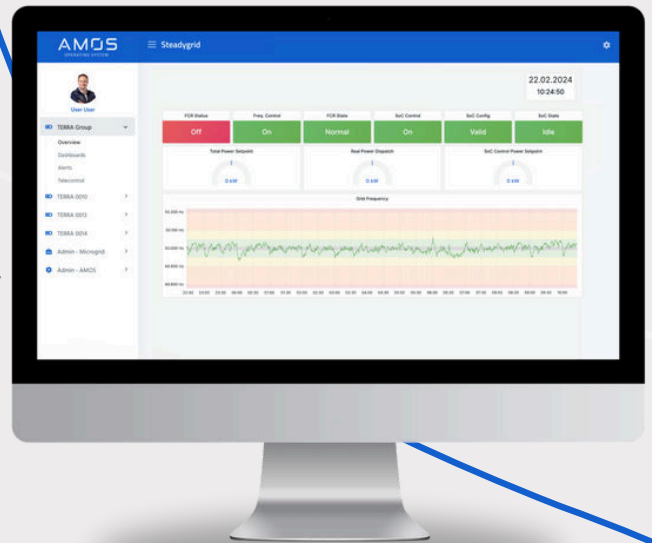

Distributes workload in a virtual battery block to minimize the thermal stress of individual BESS units

AMOS

STEADYGRID: Ancillary services

AMOS SteadyGrid introduces a cutting-edge solution for grid stability, offering ancillary services designed to meet the highest industry standards.

PERFORMANCE SPECIFICATIONS:

FREQUENCY CONTAINMENT RESERVE (FCR)

Executes FCR algorithms according to entso-e standards

FAST FREQUENCY RESERVE (FFR)

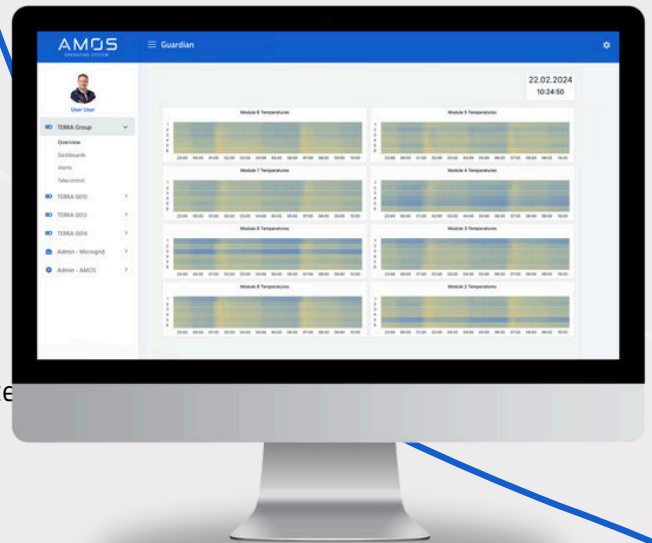

Executes FFR services according to entso-e standards with ramp-up time below 700 milliseconds

AMOS

GUARDIAN: Revolutionary BESS optimizer

AMOS Guardian sets a new standard in Battery Energy Storage System optimization, offering a range of advanced functionalities to ensure performance, reliability, and longevity.

PERFORMANCE SPECIFICATIONS:

VALUE PROTECTION

Modulates power setpoints to reduce degradation, thermal stress, increase performance, and extend technical life

WARRANTY PROTECTION

Constantly assesses the impact of operational actions on warranty and maintenance agreements for assets

RELIABILITY MONITORING

Monitors the reliability of BESS units, providing insights into performance and stability

DEGRADATION TRACKING

Tracks and alerts on potential degradation in the performance of monitored units

DETERIORATION MODELING

Utilizes models to predict and understand the deterioration patterns of BESS over time

DETECTION OF ANOMALIES

Automatically identifies irregularities or deviations from expected behavior

PREDICTIVE ALARMS

Anticipates potential issues and trigger alarms before they occur

PREDICTIVE MAINTENANCE

Forecasts maintenance needs based on asset health data, minimizing downtime

ROOT CAUSE ANALYSIS

Conducts in-depth analysis to identify the underlying causes of system issues or failures
